

# LAMIEMPAQUES: THERMOFORMING YOUR IDEAS!

“We have shifted our production to use 100% post-consumer recycled PET by introducing the deCON as essential part of our production facility.”

CARLOS HUMBERTO FERNÁNDEZ ISAAC  
GENERAL MANAGER

Lamiempques is a Colombian designer and manufacturer of tailor made and stock thermoformed plastic packaging, utility, and point of purchase products for food, retail, merchandising, and general industries.

A family-owned business since 2001, they are one of the few vertically integrated thermoformers of thin gauge rigid plastic packaging with an own in-house PET extrusion process in Colombia. Lamiempques designs and develops thermoformed products that creates value for our customers by producing creative utility parts to solve any industry need, POP material that exemplifies brands equity making them visible to customers, food packaging that encourages impulse purchases through visibility and safety, and innovative retail packaging that enlightens your product worth with maximum shelf appeal.

„We understand the importance of packaging as an integral part of our customer’s product for its supply chain, protection, exhibition and sales promotion. And that’s why our designers are driven by innovation, cost reduction, raw material efficiency and product performance.

Conscious that our planet needs to lower the environmental impact of industries all over the world and the market requirement for environmental friendly products, we have shifted our production to use 100% post-consumer

recycled PET by introducing the deCON as essential part of our production facility. By using rPET we are not only being environmentally-responsible, but also socially-responsible creating hundreds of indirect workers in the recycling industry, and reducing food waste providing packaging that protects and extends the product shelf life.

Working with Starlinger viscotec’s deCON has improved our productivity, enhanced the intrinsic viscosity of rPET, boost our thermoformed parts quality, and provide food grade raw material.”
