

BUNDLED EXPERTISE ON rPET AT K 2016

FLAKE TO SHEET, FLAKE TO PREFORM, FLAKE TO FABRIC & BOTTLE TO BOTTLE

Another very successful K show, the worldwide most important fair for the plastics and rubber industry, for viscotec took place from October 19 – 26, 2016 in Dusseldorf.

Main focus of Starlinger's booth in Hall 16 has been PET treatment and the processing of rPET in innovative packaging solutions to underline the fact that PET is the only polymer which can be recycled into high-quality form for endless reuse. viscotec displayed - besides the visco-STAR 150 solid state polycondensation reactor for the iV increase and decontamination of PET - their brand new centerWINDER, suitable for single

or multiple rolls, to ensure winding quality and flexibility without compromise with its fully automatic roll and shaft handling. The centerWINDER upgrades your existing rigid film lines by providing super-accurate winding at highest automation level with an integrated roll wrapping mode for roll vendors. Minimized floor space requirements and simple operation procedure through the design for one-man operation guarantee a maximum of operation efficiency by ensuring super safe operation with its unmatched safety standards. viscotec received inquiries for

new projects from visitors from more than 75 countries all over the world.

The highlight was a closed business of a viscoSHEET rPET sheet production line with Mexican recycling giant **GREEN Mind** during the exhibition. The line produces high-quality rPET sheet out of up to 100 % recycling material, which can also be used for food grade packaging. Virgin PET, PCR pellets and post industrial production waste can be processed directly. With this investment, **GREEN Mind** makes a step towards vertical integration and enters the packaging market.
